

Search results not showing Title in Tomcat WebVoyage

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 8.1.1
-

Problem Symptoms

- TALL search in Classic WebVoyage shows title, author, date & location
- Same search in Tomcat WebVoyage does not show title, only author, date & location

Cause

Tomcat WebVoyage does not use the "Show Index Column With Search Results" setting in System Administration.

Resolution

This is by design. You can add the desired column to the Search Results fields.

1. System Administration > Search > Indexes - Composite Definitions > TALL > Edit > Search Results
2. Move Title (or desired display field) from Available to Selected column.

NOTE: If already using 3 fields in Selected column, highlight one and move back to Available to make room for new display field.
