

## Setting "Display In OPAC" to No not working

- **Product:** Voyager
  - **Product Version:** 7.2.4
- 

### Problem Symptoms

Serials issue checked in with Display in OPAC set to "No" in check-in history is still displaying in WebVoyage

### Cause

Serial issue has been collapsed into holdings record

### Resolution

1. Log into Cataloging and retrieve bib and holding record for check-in record
  2. Review holding record. Note that record has 86x fields for collapsed serials issues
  3. Edit record to remove these fields OR Edit displayh.cfg (Classic) / displayHoldings.xml (Tomcat) on the server to remove 86X fields from display.
