
acq-17: "File size too large"

- **Article Type:** General

Problem Symptoms:

The \$alephe_scratch/ p_acq_17 job log, produced by the acq-17 ("List of Orders per Budget") Service, has the following errors:

```
I/O error : file 'TP1'  
error code: 9/194 (ANS74), pc=0, call=1, seg=0  
194 File size too large
```

```
I/O error : file 'FORM_IN'  
error code: 9/194 (ANS74), pc=0, call=1, seg=0  
194 File size too large
```

Cause:

The xxx50 \$data_scratch/acq_17_01 temporary file exceeds the file size limit of 2 GB.

Resolution:

acq-17 needs to be run with parameters which produce a smaller output file.

The variables at work here are the budget number:

```
setenv p_budget_number "SPAN_FMO-2-13"
```

and the hierarchy:

```
setenv p_hierarchy "Y"
```

Run the job with a different budget number and/or with "Use Hierarchy Budget" = "N".

Note: It seems that, once a greater-than-2GB acq_17_01 is generated, all p_acq_17 runs (regardless of the budget-numbers) will fail with the above-described errors, and the bad, greater-than-2GB acq_17_01 will *not* be overwritten as it should be. We have found that the bad acq_17_01 file needs to be deleted or renamed before any subsequent acq-17 runs will be successful.
