
RC 001550: Implementing new tab100 variable - INDEX-ITM-LINK - to allow

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Problem Symptoms:

Implementing new tab100 variable - INDEX-ITM-LINK - to allow indexing of the ITM-linked records. When a title was linked to an item by LKR field of type ITM and the call number in the item was updated, the index for the call number was not updated for the linked record. This has been corrected by setting the INDEX-ITM-LINK variable in tab100 to Y.

The default creation of z07 remains unchanged.

Cause:

Defect

Resolution:

Unix files:

`./alephm/source/com/update_z07.cbl`

Category: Cataloging (500)

Subject: Search
