## Expanding holdings ID from z30\_hol\_doc\_number\_x

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
- 

### Description

Using routine expand\_doc\_bib\_z30 expanding holdings ID from z30\_hol\_doc\_number\_x does not work.

./xxx50/tab/expand\_doc\_bib\_z30 has this:

```
# z30-hol-doc-number-x          x space      N
```

But even in Oracle the name of the field is Z30\_HOL\_DOC\_NUMBER\_X although the Aleph programs are internally referring to it as Z30-HOL-DOC-NUMBER (without X).

### Resolution

In ./xxx50/tab/expand\_doc\_bib\_z30 change from

```
# z30-hol-doc-number-x          x space      N
```

to

```
# z30-hol-doc-number            x space      N
```
