Stop automated e-mails from batch processes

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 21

Problem Symptoms:
* The Aleph version was upgraded from Aleph 18 to Aleph 21
* Since then two sets of automated emails are sent to the main inbox each day.
* They appear to be reports confirming that processes/routines on our server have successfully run.
We would like to stop these e-mails

Cause:
Table tab_alert of demo library usm50 contains examples, resulting in failure reports

Resolution:
1. Deactivate the existing lines in ./usm50/tab/tab_alert by adding '!' in front of the following lines.
4
!-!!-!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!
!E example1@test.com CIRC
!E example2@test.com ALL

2. Restart the PC Server (util w/3/3)

Additional Information

The functionality is also described in document 'Aleph 21 System Librarian's Guide - Task manager', chapter '4 Sending alerts'.
