## AIK: OPatch inventory set up improperly for Solaris

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 21
- 

### Problem Symptoms:

\* Installing Aleph version 21 on Solaris. AIK step 3-3 runs, but does not set up the OPatch environment properly.

\* Examining the db\_[creation.sh](#) script, cause of the issue is toward the end, where it tries to set up the inventory. The wrong location is used for the oralnst.loc file. (There is none for Solaris.)

### Cause:

Error in the db\_[creation.sh](#) script.

### Resolution:

This will be corrected in the next AIK re-packaging (in Dec 2012).

**Category:** Installation & Upgrades (500)

**Subject:** New Installation (500)
