
jobd.log: Error: create_library_file_name

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

The execution of a scheduled job in job_list fails and in the \$alephe_scratch/jobd.log file there is this error message:

```
Error: create_library_file_name - no env variable found for xxx_dev
defaulting to aleph_dev.... que_batch
aleph_que.c: No such file or directory
```

Cause:

1. The procedure parameters contain spaces
2. The job_list parameters are not aligned with the table columns (are shifted to the left or to the right).

Resolution:

1. Check the job_list parameter alignment copying the table guide

```
! 2 3 4 5
```

```
!!-!!!!!!!!-!-!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!>
```

```
! 2 3 4 5 6 7
```

```
!!-!!!!!!!!-!-!!!!!!!!!!!!!!!!!!!!-!!!!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!-!!!!!!
```

just above your line.

2. Check carefully the procedure parameters comparing them with those contained in the log of a working one .
