

User credentials in www_server.log when user logs on to Primo

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Problem Symptoms:

- When patrons are logging into Primo (via PDS-authentication against Aleph) the patron verification is written in www_server_***.log. This is a security problem.
- Patrons with lot of loans are not able to login.

Example:

/X?op=BOR_INFO&TRANSLATE=N&LIBR

Cause:

PDS is configured to use bor_info instead of bor_auth.

Resolution:

1. Change setup in \$aleph_dev/pds/conf_table/tab_service.xxx50 so that in [BOR_INFO]-section BOR_AUTH instead of BOR_INFO is used.

Example:

Old:

```
!  
!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!  
[AUTHENTICATE]  
program = aleph.pl  
params = server,443,BOR_AUTH,XXX50,Y,WWW-X,WWW-X  
[END]
```

[BOR_INFO]

```
program = aleph.pl  
params = server,443,BOR_INFO,XXX50,Y,WWW-X,WWW-X  
[END]
```

New:

```
!  
!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!  
[AUTHENTICATE]  
program = aleph.pl  
params = server,443,BOR_AUTH,XXX50,Y,WWW-X,WWW-X  
[END]
```

[BOR_INFO]

```
program = aleph.pl
```

params = server,443,BOR_AUTH,XXX50,Y,WWW-X,WWW-X
[END]

Category: X-server (500)
