

ORA-39151: Table "XXXXX"."ZXX" exists

- **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms

In the log of upgrade express option 2.1 (Install Oracle data) there are many of these lines:

```
ORA-39151: Table "BIN51"."Z305" exists. All dependent metadata and data will be skipped  
due to table_exists_action of skip
```

Cause

The Oracle tables are already in use because the Apache::DBI module was enabled in Apache to create a persistent connection with database.

Resolution

Shutdown Apache during the execution of Upgrade Express kits.
