
The transaction-id value of an ILL-REQUEST APDU is an illegal duplicate

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

- * Error message "StatusOrErrorReport from ... StatusThe transaction-id value of an ILL-REQUEST APDU is an illegal duplicate" when handling an ISO ILL borrowing request
- * But the lending request on the partner side is successfully automatically created
- * What does the error message mean and does it cause any problems in processing the requests?

Cause:

At the very same moment when the borrowing request was processed by ue_19, a member of the ILL staff clicked on the "Send" button for the request. As a result, two APDU messages of type "REQUEST" were created for it. When the ue_17 then processed these messages, it detected the duplication and sent an error report to the requester.

Resolution:

The message is just for information only. It does not cause any problems in the further handling of the request.
