
Ambiguous headings, display

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Problem Symptoms:

Ambiguous headings are differentiated in the AUT database by adding a specific identifier in subfield 9, e.g.

1001 \$\$a Chatwin, Bruce\$\$9123456

and

1001 \$\$a Chatwin, Bruce [without subfield 9]

However it's not possible to differentiate in the headings list although there is an according entry in xxx01/tab/edit_field.ing:

```
1 # 1#### C -wc2 .
```

```
2 a A ^
```

```
2 9 A ^
```

When viewing the index list both entries appear in one line.

Cause:

Configuration

Resolution:

In xxx01/tab/edit_field.ing the display for the ACC headings code (line identifier "c") has to be the heading code itself and not the field code. Change

```
1 # 1#### C -wc2
```

to

```
1 # PER C -wc2
```

and restart the PC server
