

## Text in SDI Mails is cut for a specific library

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Problem Symptoms:

For a specific library the text in SDI mails is cut, it's incomplete. For another library on the same server it's working correctly.

### Cause:

Configuration

### Resolution:

Comparing file xxx01/form\_lng/sdi-no-results-00 for both libraries shows different lines and in the file for the library where text is cut the indentation seems to be incorrect. Copy the file from the library where it's working correctly, then adjust it to the library's needs.
