

ORA error when using routine update_z103_ids

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Problem Symptoms:

When using the update_z103_ids routine (which creates UP, DN or ITM links based on target record numbers stored in subfield \$w of specific fields):

1. Oracle error messages are displayed if the record numbers in subfield \$w are invalid.
2. It takes a long time to create ITM links (based on ADM links) for records that have many other Z103 links.

Cause:

Defect

Resolution:

rep_change 2358 in Aleph 21.

Description: When using the update_z103_ids routine (which creates UP, DN or ITM links based on target record numbers stored in subfield \$w of specific fields):

1. Oracle error messages are displayed if the record numbers in subfield \$w are invalid.
2. It takes a long time to create ITM links (based on ADM links) for records that have many other Z103 links.

Solution: This has been corrected. (1) If subfield \$w contains a non-numeric value, no link is created. (2) System performance has been improved for records with many Z103 links.
