
expand_doc_bib_loc_usm and missing SBL field

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

SBL field is not created in all cases from program expand_doc_bib_loc_usm. Sometimes the field appears, sometimes not. Program is added to xxx01/tab/tab_expand like
WEB-FULL expand_doc_bib_loc_usm OPTIMIZE=N

Cause:

Configuration

Resolution:

Program expand_doc_bib_loc_5_c (which is part of expand_doc_bib_loc_usm) creates SBL fields from the subscription Z16 of the ITM linked ADM record. Instead program expand_doc_bib_loc_b2 should be used which takes the information not from the subscription but from item record.

The following line in xxx01/tab/tab_expand ?€|
WEB-FULL expand_doc_bib_loc_usm OPTIMIZE=N

?€| should be replaced with this lines:

```
WEB-FULL expand_doc_bib_loc_1_a
WEB-FULL expand_doc_bib_loc_1_b OPTIMIZE=N
WEB-FULL expand_doc_bib_loc_1_b2
WEB-FULL expand_doc_bib_loc_1_c2
WEB-FULL expand_doc_sort_loc_a
WEB-FULL expand_doc_bib_loc_2_a
WEB-FULL expand_doc_bib_loc_3_a
WEB-FULL expand_doc_bib_loc_4_c
```

Additional Information

For activating the update you have to restart ?€Pc_server for the GUI ?€PWEB-server for the Opac ?€Ue_01 for indexing
