
Primo export log error "Exception on getting MARC xxxxxx"

- **Product:** Voyager
 - **Product Version:** 8.1.2
-

Problem Symptoms

- Primoexp.log contains error below, and record is skipped:

```
218767 [main] ERROR com.endinfosys.voyager.MarcDB - Exception on getting  
MARC 123456
```

```
218767 [main] ERROR com.endinfosys.voyager.extract.ExtractBibs - BIB-  
Required could not get next Bib
```

Cause

The Primo extract cannot interpret a field entered incorrectly in Cataloging

Resolution

1. In Cataloging, fix erroneous field in bib record; save to database.
 2. Run Primo extract again, or wait for record to get picked up in next extract.
