
Tomcat OPAC interface displays data from wrong instance

- **Article Type:** General
 - **Product:** Voyager
-

Problem Symptoms:

* After upgrade, the OPAC interface for one Voyager database instance (xxxdb) is styled correctly, but searches retrieve data from a different instance.

Cause:

The /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/WEB-INF/web.xml file had the wrong value for XServicePort (where xxxdb is the Voyager Database Instance).

Example:

```
<context-param>  
<description>  
The port at which voyager XServices can be found  
</description>  
<param-name>XServicePort</param-name>  
<param-value>7014</param-value>  
</context-param>
```

Resolution:

- 1) Edit /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/WEB-INF/web.xml
- 2) Find the XServicePort section
- 3) Change the param-value to the correct port

Additional Information

If you are unsure of the correct port, check the Apache configuration: `grep Listen /m1/shared/apache2/conf/ActivatedVirtualHosts/xxxdb_vxws_httpd.conf`
