

Import Profile / new Merge rule: Completed with Errors

- **Article Type:** General
 - **Product:** Alma
-

Problem Symptoms:

- * creating import profile that would replace all existing fields except for all 035 fields
- * created new merge rule adapting the syntax from the help file
- * after running the profile, get message "completed with errors"; record is not updated
- * input file contained one record: number of records processed 1, number of matches found 1
- * no other action or error occurred

Cause:

The merge rule had a trailing space after the "end" statement. After removing this space, saving the rule, and running the import again, the merge was successful.

Resolution:

To identify and remove trailing spaces in merge rules, perform the following steps:

- 1) Go to Alma Menu > Resource Management > Open Metadata Editor
- 2) In the left-hand menu > Merge, double-click the relevant rule
- 3) Save (to open the drool syntax window)
- 4) Select all (ctrl+A) to reveal whether there are trailing spaces
- 5) Remove any trailing spaces
- 6) Save
