
Problems when we search titles like "Web 2.0"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

Searching for a title like "Web 2.0" does not provide a result, despite there are definitely records in the database containing those words in the title.

Cause:

Configuration

Resolution:

In xxx01/tab/tab_word_breaking, routine 90 del_dot is added. This routine deletes a blank between 2 words so that e.g. a search for "Web 2.0" is changed into "Web20". therefore nothing can be found when searching for more than one word.

Modify xxx01/tab/tab_word_breaking the following way:

Before:

```
90 # del_dot
```

Now:

```
!!!90 # del_dot  
90 # compress .
```

Additional Information

Afterwards daemon ue_01 has to be restarted. There's no need to re-index as routine 90 is only responsible for parsing the FIND query.
