
manage-18: "I/O error: ... File not found"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

manage-18 ("Load ALEPH Sequential MARC Records") runs to completion but fails to load the updated records/fields. The \$alephe_scratch/xxxnn_p_manage_18 log has the following error:

```
I/O error : file 'xxxxx_yyyyy'  
error code: 3/5 (ANS85), pc=0, call=1, seg=0  
13 File not found
```

Cause:

1. If the submission screen had the "Read From / Print To Adm" checkbox unchecked, manage-18 has failed to find the input file in the xxx01 \$data_scratch directory.
2. If the submission screen had the "Read From / Print To Adm" checkbox *checked*, manage-18 and the log file contains the line: "2nd param (target and user name): „,XXX50,<username>", manage-18 has failed to find the input file in the \$data_scratch directory of the ADM library associated with the specified xxx01 library.
3. As described in Article 000018627 (p_manage_21: "File xxx does not exist" when the file *does* exist), the inclusion of uppercase characters in the name can cause the file to not be found.

Resolution:

Change the "Read From / PrintToAdm" checkbox to the correct value and omit uppercase characters from the file name.

Additional Information

Article 000005370 (Uncheck of "Read From/PrintToADM" in services) discusses the default value for the "Read From / printToAdm" checkbox.
