

## Primo RTA doesn't display Collection for particular library

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Problem Symptoms:

The Collection doesn't display for a particular library in the Primo RTA (Real-Time Availability) Calculated Availability Text or in the Location tab; it does display OK for other libraries.

### Cause:

The collection was missing from the Aleph ADM library `./xxx50/tab/tab40.Ing`.

### Resolution:

Add the collection to `./xxx50/tab/tab40.Ing`.

---

## Additional Information

If the ADM has two `tab15.Ing` tables (for example, `tab15.fre` and `tab15.eng`) the collection needs to be in both of them.
