

Orphan Z35 records

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

Checking the Z35 records some of them are without corresponding Z30

Cause:

The item was moved between the ADM using the Overview Tree in the Cataloging module

Resolution:

It is how Aleph works; it depends from the `move_z30_to_adm` routine that is defined in the `tab_move_record` table in BIB libraries.

Category: Cataloging (500)
