## Entries in Aleph Services in OPAC appear double

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Problem Symptoms:

In Aleph Services Tab entries for authors appear double, in one line in the form "name - GND IDN" in the next line in the form "GND IDN"

### Resolution:

Due to the special GND configuration it is necessary that the according index has one entry for "name - GND IDN" (field 100\$a and \$9) and another entry for "GND IDN" (field 100\$9). When the Services tab is opened both entries from the index list are displayed. Avoid this by deleting the display of subfield \$9 in table xxx01/tab/edit\_field.lng.

#### Example:

With subfield 9

```
1 # PER## C
2 a ^
2 b ^
2 9 ^^/^^
```

Without subfield 9

```
1 # PER## C -9
2 a ^
2 b ^
2 9 ^^/^^
```

---

## Additional Information

Only relevant for Customers using the GND (German National Library Authority database)
