
Handling of Scanjobs, adding ADAM objects

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

ADAM objects are linked to a wrong BIB record when the item was moved to another BIB record and the original BIB record was deleted.

Cause:

Handling

Resolution:

For identification of objects to the appropriate BIB record the system number is taken into account and not the barcode.

```
<?xml version="1.0" encoding="UTF-8"?>
<file>
<record xmlns="http://www.loc.gov/MARC21/slim"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://www.loc.gov/MARC21/slim http://www.loc.gov/standards/marcxml/schema/MARC21slim.xsd">
<controlfield tag="SYS">000159639</controlfield>
</record>
<z403>
<z403-title>Inhaltsverzeichnis</z403-title>
...
```

In the loading file the "old" system number of the record which was deleted is contained and therefore the objects are linked there.

Please avoid the deletion of a record as long as the ADAM objects are not loaded.
