

## Searching Portfolios by Local Interface Name

- **Article Type:** General
  - **Product:** Alma
- 

### Problem Symptoms:

When I search portfolios by "interface name", I get zero results or incomplete results or wrong results. Why is that?

### Cause:

The Alma Simple Search searches by the interface name of the electronic collection, not the interface name of the electronic portfolio.

### Resolution:

Instead of the Simple Search, use the Advanced Search and select "Interface name" from the "Electronic portfolio" column.

---

## Additional Information

The "Interface name" in the Simple Search is equivalent to the "Interface name" in the "Electronic collection" column of the Advanced Search.
