
Automatische Verknüpfung zu falschem Autoritätsdatensatz

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Problem Symptoms:

When you add an unpreferred term to an AUT record and the same term is already available as preferred term in another AUT record all BIB records will be linked to the record with the unpreferred term.

Cause:

Configuration

Resolution:

Add routine `fix_doc_aut_duplicate` to AUT library, `tab_fix`.

For detailed description see "System Librarian's Guide - Cataloging".
