

3.2.2 Install overriding Linux LANG Setting

- **Article Type:** General
 - **Product:** Rosetta
 - **Product Version:** 3.2.2
-

Problem Symptoms:

SIP ingesting fails when double byte characters are used in the content stream filenames.

Cause:

SP 3.2.2 updates the .cshrc file under /exlibris/dps/d4_1/profile/ changing the LANG environment to "C".

Resolution:

To have it work, navigate to the .cshrc file (under /exlibris/dps/d4_1/profile/), and change:

"setenv LANG C" to "setenv LANG UTF-8"

Also change:

"setenv LC_ALL C" to "setenv LC_ALL UTF-8"

Additional Information

This bug was reported in Jira issue "DPS-12546"
