
Advanced Search with Solr in Rosetta failing after 3.2.2 upgrade

- **Article Type:** General
 - **Product:** Rosetta
-

Problem Symptoms:

Rosetta advanced search fails with the following error:

```
2014-05-01 13:40:24,132 ERROR [com.exlibris.digitool.mng.workBench.SetDetailsAction] (http-0.0.0.0-1801-7) []
org.apache.solr.client.solrj.SolrServerException : Error executing query
Caused by: java.lang.IllegalArgumentException at java.net.URI.create(URI.java:841)
```

..

Caused by: java.net.URISyntaxException: Illegal character in scheme name at index 0: <https://dcms-ua.ldschurch.org/solr/select>

Cause:

The problem is caused by a blanks in front of the http:, that need to be removed.

Resolution:

Verify that there are no blanks in the global.property file
