
Running "Change Object Location (adam-03)" does not do anything

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

Running "Change Object Location (adam-03)" does not do anything. The following path names were set in the service:

```
setenv p_source_directory "/exlibris/aleph/u20_n/adam-objekte/xxx51/view"  
setenv p_target_directory "/exlibris/aleph/u20_n/adam-objekte/view"
```

Cause:

Directory name wrong

Resolution:

For p_adam_03 the relevant name for the object location is the one that is stored in z403 record. The names are:

Z403_F_DIRECTORY

```
-----  
$alephe_root/./adam-objekte/xxx51/index/1  
$alephe_root/./adam-objekte/xxx51/index/2
```

...

\$alephe_root/./... is not a directory name p_adam_03 can handle. You should change the name in Z403 records using SQL from "\$alephe_root/./adam-objekte" to "/exlibris/aleph/u20_n/adam-objekte" and afterwards run p_adam_03.

It's important to also change the directory name in \$alephe_tab/tab_z403_directory.lng:

```
! 1 2 3 4
```

```
!!!!-!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!->
```

```
ALEPH VIEW Primaerer Speicher $alephe_root/./adam-objekte/view  
ALEPH INDEX Index (Allgemein) $alephe_root/./adam-objekte/index  
ALEPH THUMBNAIL Thumbnail (Allgemein) $alephe_root/./adam-objekte/thumbnail  
ALEPH BACKUP Backup (Allgemein) $alephe_root/./adam-objekte/backup
```
