

Location limits not working in WebVoyage

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 9
-

Problem Symptoms

Search by two location limits - one applied in initial search and one applied as post search filter - returns results for both locations.

Cause

Working as designed.

Resolution

Clear initial limit and then apply one location limit at a time to see what holdings are in each location limit group.

Additional Information

Location limits use the mfhd 852 subfield b to determine location for location limit groups.
