
Error message "CSRF Violation occurred"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Problem Symptoms:

Adding the token validation with "TOKEN-VALIDATION=Y" in \$alephe_tab/tab100 and updating the required html-files with the \$9900 place holder as hidden parameter does not bring the expected result but runs into error message "CSRF Violation occurred. Please re-login into the system." when trying to delete records from My e-shelf or when trying to use the *Renew All* functionality.

Cause:

Configuration

Resolution:

In some of the tables which should be enhanced by a line like ...

```
<input type=hidden name="token_id" value=$9900>
```

... according to documentation the line is missing.

Compare your local files with the standard file in a-tree.

Additional Information

CSRF Valuation was implemented in Aleph 21. Please see "Aleph System Librarian's Guide - Web Opac", chapter 25.2
