## Tomcat 7 hung on Voyager 9 server

- **Product:** Voyager
  - **Product Version:** 9
- 

### Problem Symptoms

- Tomcat hung during "tsvrcctl start".
- Following messages display during Tomcat startup:

```
/m1/voyager/xxxdb/tomcat => tsvrcctl start
+++++++ YAJSW SET ENV ++++++++
wrapper home : /m1/voyager/xxxdb
configuration: /m1/voyager/xxxdb/conf/wrapper.conf
----- YAJSW SET ENV -----
Archiving existing voyager.conf.....
Creating new voyager.conf.....
Starting to run wrapper for xxxdb tomcat service...
PLEASE WAIT...
Wrapper is starting...
```

### Cause

/m1/voyager/xxxdb/tsvrcctl.wrapper was misconfigured and it caused Tomcat used wrong version of Java (where xxxdb is the Voyager Database Instance).

### Resolution

1. In /m1/voyager/xxxdb/tsvrcctl.wrapper, change `export PATH=$PATH:${JAVA_HOME}/bin` to `export PATH=${JAVA_HOME}/bin:$PATH`.
2. Stop & restart tomcat.

### Additional Information

VYG-5566 is resolved in Voyager 9.0.0 HFS 1.
