## OPAC uses default skin instead of custom skin

- **Product:** Voyager
  - **Product Version:** 8.0.0
- 

### Problem Symptoms

OPAC is using the default skin en\_US instead of the custom skin

Confirmed that the correct settings are in /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/WEB-INF/web.xml file as per [Setting the default skin in WebVoyage](#) (where xxxdb is the Voyager Database Instance)

### Cause

Default skin is also specified in /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/htdocs/index.html

### Resolution

1. Remove the following references to "en\_US" in the /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/htdocs/index.html file, as illustrated below:

#### BEFORE:

```
<li><a href="/vwebv/searchBasic?sk=en_US">Basic search</a></li>
<li><a href="/vwebv/searchAdvanced?sk=en_US">Advanced search</a></li>
<li><a href="/vwebv/enterCourseReserve.do?sk=en_US">Course reserve materials</a></li>
<li><a href="/vwebv/login?sk=en_US">Log in to use your saved preferences</a></li>
<li><a href="/vwebv/myAccount?sk=en_US">Review your account</a></li>
```

#### AFTER:

```
<li><a href="/vwebv/searchBasic?">Basic search</a></li>
<li><a href="/vwebv/searchAdvanced?">Advanced search</a></li>
<li><a href="/vwebv/enterCourseReserve.do?">Course reserve materials</a></li>
<li><a href="/vwebv/login?">Log in to use your saved preferences</a></li>
<li><a href="/vwebv/myAccount?">Review your account</a></li>
```

2. Save and exit the index.html file (wq!)
  3. Restart Tomcat using the "/m1/voyager/xxxdb/tomcat/tsvrcctl restart" command
