

## dpupgdiag.sql vs, dbupgdiag.sql

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 21
- 

### Problem Symptoms:

Section 11 of the "How to Upgrade Oracle Software and Database from Oracle Version 11.2.0.3 to 11.2.0.4" document says, "Run the dpupgdiag.sql script found in a text file on the Documentation Center ..."

### Cause:

User error

### Resolution:

What p.12, section 11, of the "How To Upgrade Oracle ..." doc actually says is "Run the dbupgdiag.sql script ...".

That is, the script name is not "dpupgdiag.sql", but, rather, "dbupgdiag.sql".

It is in the Documentation Center ./Cross Product/Technical Documentation/Oracle/Oracle 11g/ folder.

**Category:** Oracle (500)
