

Reports not being written to the c:\tempAleph directory

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

After upgrade to a new version of Aleph, html-format reports processed by the print daemon which were previously being written to the [c:\tempAleph](#) directory are no longer being written.

Cause:

alephcom.ini TempDir parameter

Resolution:

The reports processed by the print daemon are written to the location specified in the PC's .\Alephcom\tab\alephcom.ini TempDir parameter. It may be that on this PC the value has been changed from the as-delivered:

TempDir=[c:\tempAleph](#)

Category: System Management (500)
