
manage-01 / tab11_word: "8#####" and "85#####" don't work

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

Although other extremely wild-carded entries (5#####, 6#####, 7#####, 8#####, and 85#####) in the xxx60 tab11_word work, 8#####, and 85##### do not: after a certain point, words in these fields are not indexed by manage-01. (Curiously, running the records with the missing words through manage-40/ue_01 usually *does* result in them being indexed.)

Cause:

Uncertain.

Resolution:

Rather than having 8#####, or 85#####, lines, break them into multiple lines, such as:

852##

856##

<etc.>
