

How to delete sets of manifestations

- **Article Type:** General
 - **Product:** DigiTool
 - **Product Version:** 3
-

Description:

In Meditor, Object/Delete Selected Object works only if there are no manifestations of the object. If there is a related manifestation, an attempt to delete the object results in the message "Error deleting object in repository [the Digital Entity has a 'manifestation']". So 1) how do you delete an object that has a manifestation? 2) how do you delete the whole family of manifestations?

Resolution:

To delete a single object that has a manifestation in Meditor, you need to first remove its relation to aother objects as below:

- 1) Open the object in the Meditor
- 2) Click "Manifestations", "Part of" or "Includes" tab in the editor panel to see the related PID
- 3) Right click the related PID and delete the relation

After all the relation is deleted, you will be able to use "Object/Delete Selected Object" function to delete the object.

If you want to delete the whole family of manifestations, you can do it in the web management module:

- 1) Log on to the web management module, select the unit to which the object belongs.
- 2) Click "Maintenance" on the menu bar
- 3) Select "Delete Digital Entities" service, make sure the check box of "Delete Related Objects" is checked, then enter the object pid as "Start PID" and "End PID" before clicking "Submit"
