### Question

How do I know which JBoss version I have?

---

### Answer

To find out which JBoss version is currently installed on your Aleph server, perform the following steps:

1.  
`cd /exlibris/aleph/a20_n/ng/aleph/home/system/thirdparty/openserver/lib`
2.  
`cp jboss-system.jar /tmp`
3.  
`cd /tmp`
4.  
`unzip jboss-system.jar`

```
Archive: jboss-system.jar
inflating: META-INF/MANIFEST.MF
creating: org/
creating: org/jboss/
creating: org/jboss/deployment/
creating: org/jboss/deployment/cache/
creating: org/jboss/deployment/scanner/
creating: org/jboss/system/
creating: org/jboss/system/server/
inflating: org/jboss/Version.class
inflating: org/jboss/deployment/ClasspathExtension.class
inflating: org/jboss/deployment/ClasspathExtensionMBean.class
...
...
inflating: org/jboss/system/server/ServerLoader.class
creating: org/jboss/metadata/
inflating: org/jboss/metadata/jboss-service_3_2.dtd
inflating: org/jboss/metadata/jboss-subscription.dtd
inflating: org/jboss/version.properties
```

5.

```
less ./META-INF/MANIFEST.MF
Manifest-Version: 1.0
Specification-Title: JBoss
Created-By: 1.4.2_04-b05 (Sun Microsystems Inc.)
Ant-Version: Apache Ant 1.6.1
Implementation-Title: JBoss [WonderLand]
Specification-Vendor: JBoss (http://www.jboss.org/)
Specification-Version: 3.2.5
Implementation-Vendor-Id: http://www.jboss.org/
Implementation-Version: 3.2.5 (build: CVSTag=JBoss_3_2_5 date=20040625
1954)
Implementation-Vendor: JBoss.org
Implementation-URL: http://www.jboss.org/
```

The lines towards the end show the version of your JBoss installation:

\* this is how the lines look for JBoss version 3.2.5:
