
ADAM default number of objects (max_no_storage_files)

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01
-

Description:

The System Librarian's User Guide states that ADAM automatically creates new sub-directories under the defined storage directory.

"The directory names are numeric (starting with 1). The first 1000 objects are automatically stored in directory /1. Subsequent objects are stored in directory /2 and so on."

But we find that it is putting only 101 objects in each directory.

Resolution:

Though the manual suggests that the default is 1000 [objects per directory], adding the following line to aleph_start changed the behavior to the desired 1000:

```
setenv max_no_storage_files 1000
```

This issue is still open and was escalated to Development for further investigation <2010-02-14 01:00:01>.
