

Publish ADAM index entries to Primo

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 21
-

Desired Outcome Goal:

How to publish ADAM index entries to Primo?

Procedure:

There are 2 different options to create the full text index in Primo:

- 1) Field TXT which contains already the index words is published directly to Primo and is indexed there (use in xxx01/tab/tab_expand for the publishing expand "expand_doc_index_from_z403")
- 2) A link to the ADAM object is published to Primo (see document "How to publish to Primo with a URL to the ADAM digital object"), Primo reads the object and indexes it.
