Question

Records from BIB library are exported every day using "Retrieve Catalog Records (ret-01)" and "Download Machine-Readable Records (print-03)". All records in the database are selected and this takes some time. Is there a way to search only for new records?

Answer

Fastest search would be "Retrieve Catalog Records by Date (ret-04)" which searches only for records of a specific date (one day) and creates 2 output files:

1 for newly added records

1 for updated records.
