## What changes the item hold status to "S"?

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

What changes the hold status (z37\_status) to "S" (on Hold Shelf): the return of the item? or the production of the item available letter?

---

### Answer

The "S" is set by the execute\_hold\_request program, called by the pc\_cir\_c0429 (Create a Hold Request Filled Letter) program, normally resulting from the return of the item.

The factors which come into play are:

1. the 'Display list of hold requests' checkbox in GUI Circ -> ALEPH -> Options -> Return options {as discussed in Article 000019882 ("Hold Notice failing to print")}.
2. the value in column 6.1 of the ReturnHold01 line in .\Circ\tab\print.ini. If no letter is desired, then type "NO-PRINT" in print.ini, column 6.1. {Column 6.1 is reserved for the Device ID of the patron (letter) printout.}

---

### Additional Information

See also Article 000001564 ("Preventing hold-request slip printing").
