Question

When validating BIB records with parallel fields 880, the error message displays "88" instead of 880-01, 880-02 etc.

For example:

Error: There is only one 24510 field containing subfield 6 with occurrence number 88."

Answer

This is message 0230 in \$aleph(e)_error_lng/check_doc:

0230 L Error: There is only one "\$1" field containing subfield 6 with occurrence number \$2.

The check_doc program in ./xxx01/tab/check_doc is check_doc_paired_fields.

This program should be used for Paired fields, not for Parallel fields.

Example of Paired fields:

1001 L \$\$601\$\$a[Name in Chinese script].

1001 L \$\$601\$\$aShen, Wei-pin.

Example of Parallel fields (not suitable for check_doc_paired_fields):

1001 L \$\$6880-01\$\$a[Name in Chinese script].

8801 L \$\$6100-01/(B\$\$aShen, Wei-pin.
