## Change Object Location (adam-03)" and directory name

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 21
- 

### Question

When changing ADAM object locations using "Change Object Location (adam-03)" do I have to give the full name of the path with the explicit subdirectory?

---

### Answer

Please see the following information in help file for "Change Object Location (adam-03)":

#### Target Directory

Enter the full path of the directory in which the relocated objects will be stored. For example: /exlibris/aleph/a20\_1/usm01/object\_view.

So it's not necessary to give the specific path name for every consecutively numbered subdirectory.
