

## Recreate COGNOS encryption keys

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 2
- 

Desired Outcome Goal:

\* The ARC version was moved to a new server

How can the COGNOS encryption keys be recreated to run the version on the new server?

Procedure:

When do you have recreate the COGNOS encryption keys?

A. When changing server OS/Machine/IP/hostname or Java version (including build number) new encryption keys should be recreated:

B. When ARC fails to start due to encryption issues you have to recreate to encryption keys.

1. cd configuration
- 2.a restore latest cogstartup.xml backup file  
or
- 2.b use the template cogstartup.xml.tml and adapt @xxxx@ variables
3. rm -rf signkeypair/ encryptkeypair/ certs/ csk/ caSerial
4. start up ARC
