
How to configure Rosetta access rights to use 2 user groups

- **Article Type:** General
 - **Product:** Rosetta
-

Desired Outcome Goal:

You want to use LDAP to authenticate external users for Rosetta delivery.

Access rights (AR) should allow delivery for 2 groups.

For example if the user belongs to group A OR to group B he can see the object.

However, PDS knows how to check only the first group in the bor_info of the user.

Procedure:

You need to define Access Rights based on 2 different fields and to map them accordingly in the PDS bor_info.

In order to define it please do the following:

- 1) In Home > Producers > Advanced Tools > Access Right Policies > Edit Access Rights Exceptions , define 2 Access Rights based on 2 different fields (See attached screenshot)
- 2) Map the fields in a tags file (under /exlibris/dps/d4_1/pds/conf_table/) and set 2 different tags that are checked in the bor_info.

For example:

```
[ATTRIBUTES_VALUES_MAPPING]
```

```
z305-bor-status,25 = group,STAFF
```

```
z305-bor-type,DA = dept,DIGITAL-ACCESS
```
