Question

Why deposit directories are not deleted after delete job?

Answer

See Rosetta System Administration Guide, page 90 :

* 'Delete Deposits' job deletes deposit directories (parent defined under general parameter logic_deposit_area) for deposits that were declined or deleted.

* Delete Old Deposits' job deletes deposit directories (parent defined under general parameter logic_deposit_area) for deposits that were successfully processed over n days ago.

Both refer to a general parameter "delete_old_processes_older_than_days" and delete only deposit that where created X days before today.

Other directories are kept.
