
Display of combined characters in Aleph GUI

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Desired Outcome Goal:

Though decomposed diacritics {such as Combining Diacritical Marks (U+0300 - U+36F) and combined Hebrew and Arabic characters} display in combination with the character they modify in the OPAC, they do not do so in the GUI: a decomposed diacritic displays separately from the character it modifies. How to change?

Procedure:

Add the following entry to `.\alephcom\tab\alephcom.ini`:

[Main]

CombinedCharSupported=Y

Additional Information

With rep_changes 3019 and 3053 in Aleph 20 the display of combined characters in the GUI was enabled.
