

## SetPrinter parameters in HTMLprint.ini

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

What are the SetPrinter Parameters '0' and "1" in the HTMLprint.ini file?

---

### Answer

The SetPrinter parameters in the HTMLPrint.ini file are either SetPrinter=1 for "On" or SetPrinter=0 for "Off".

According to the documentation (which is the 'help.chm' file located in .\alephcom\bin\ directory on the PC):

"If SetPrinter is ON (Set Printer Manually) a Printer configuration dialog will be opened before the printing starts to select the printer manually. Also HTMLPrint will be visible."
