
Repositioned \$6 subfield

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

In a BIB record, when a paired field with \$6 as the first subfield is automatically updated via the authorities process, the \$6 subfield is repositioned so that it follows the authorized heading.

\$6 should always be the first subfield in a field.

Resolution:

We found that this can be fixed with configuration recommendations below.

1) Add in tab_fix a line with program expand_doc_sort after each line with fix_doc_ref_1. For example:

```
INS fix_doc_ref_1
INS expand_doc_sort
...
UE_01 fix_doc_ref_1
UE_01 expand_doc_sort
```

2) Set in tab_expand_sort all relevant fields with 6 as parameter. For example:

```
100## 6
```

(note that you don't have to list all the subfields, with the above setting \$\$6 will be first, then all the other fields will follow).

3) Restart ue_01, ue_08, pc_server.

This will retain the \$\$6 as the first subfield after authorities correction.

(Keywords: \$6, subfield sort)

Additional Information

\$\$6, \$6, subfield sort,
